

Fight wrinkles with Injex.

The Shireen-Poring-Method returns the skin back to the magic of youthful beauty through the application of hyaluronic acid through the pores.

Hyaluronic acid

Hyaluronic acid is a natural fountain of youth for the skin. It is naturally produced in the human body and is central to regulating cell growth and renewal. However, as we age the body produces less and less of this precious substance - the result: the unwelcome effects of aging. Stop it now! In order to neutralize the onset of aging, hyaluronic acid is introduced gently using the Shireen-Poring-Method. It is implanted into the top layers of skin and is then distributed with a massage. The skin is gently filled and smoothed from the inside out. The needle-free wrinkle reduction by hyaluronic is suitable for the first signs of superficial wrinkles and aging in the face, neck/décolleté and back of the hands. In addition a hyaluronic application is recommended to treat the skin with vitamin C to reduce age spots.

Great advantage

A great advantage of using Shireen for skin rejuvenation is that it uses a more delicate application. Treatment is visible immediately and has a long lasting effect. The skin is able to hold more moisture, the tautness increases and the formation of collagen & elastin is stimulated.

Long-term positive side effect

The collagen-rich fibrous connective tissue maintains its strength even after a complete decomposition of the material injections.
